Table of Contents

Aggregate Demand

Multipliers

Short-Run Aggregate Supply (SRAS)

Long-Run Aggregate Supply (LRAS)

Equilibrium in the Aggregate Demand-Aggregate Supply (AD-DS) Model

Change in the AD-AS Model in the Short Run

Long-Run Self Adjustment

Fiscal Policy

Automatic Stabilizers

Aggregate Demand

The Wealth Effect

- Higher price levels reduce the purchasing power of money, which decreases the quantity of expenditures.
- · Lower price levels increase purchasing power and increase expenditures

Interest Rate Effect

• When the price level increases, lenders charge higher interest to get a REAL return on their loans

Foreign Trade Effect

ullet When price levels rise, foreign buyers purchase fewer U.S. goods and Americans buy more foreign goods. X_{η} decreases.

Figure 1 An aggregate demand curve

Multipliers

 Marginal Propensity to Save (MPS); How much people save instead of consume when there is a change in income. Expressed as

$$MPS = \frac{\Delta savings}{\Delta Disposable Income}$$

 Marginal Propensity to Consume (MPC); How much people consume rather than saving when disposable income changes. Expressesed as a fraction:

$$\mathit{MPC} = \frac{\Delta consumption}{\Delta Disposable\ Income}$$

• Spending Multiplier

$$\frac{1}{MPS} = \frac{1}{1 - MPS}$$

Simple Tax Multiplier

$$\frac{MPS}{MPC}$$
